Abstracts

Food grade anti-caking agents are chemical or mineral substances, such as silicon dioxide, calcium silicate, sodium aluminosilicate, or magnesium stearate, that are added in small quantities to powdered or granulated food products to prevent clumping, ensure free-flowing consistency, and extend shelf life by absorbing excess moisture and reducing particle adhesion. These additives are strictly regulated for safety and purity by food safety authorities like the FDA and EFSA and are widely used across industries including dairy, baking, seasoning, soups, instant beverages, and processed foods where maintaining product texture, appearance, and ease of handling is critical.

The global Food Grade Anti Caking Agent market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
