Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Food Grade Dry Film Lubricant competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Dry film lubricants are made of solid lubricants such as polytetrafluoroethylene (PTFE) and molybdenum disulfide dispersed in a binder matrix to form a dry film on the surface of the equipment to reduce friction. They will not migrate into food and meet the requirements of H1/H2 and other food safety certifications. This type of product is mostly used in key parts such as baking equipment chains, cutting machine parts, packaging line rollers and bearings, and has high temperature resistance, water washing resistance and impact resistance.

The global Food Grade Dry Film Lubricant market size was estimated at USD 233.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.10% during the forecast period.
