## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Food-Grade EVOH Multilayer Coextruded Film competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global food-grade EVOH multilayer coextruded film production reached 320,000 tons, with an average global market price of US\$4,072 per ton. Food-grade EVOH multi-layer co-extruded film is a high-performance functional film made with ethylene vinyl alcohol copolymer (EVOH) as the core barrier layer, laminated with polyethylene (PE), polypropylene (PP), nylon (PA), or other adhesive layer materials through a multi-layer co-extrusion process. It exhibits extremely high gas barrier properties and is used in a variety of applications, including vacuum packaging for meat and cheese, aseptic packaging for juice and dairy products, fresh-keeping packaging for cooked food and pre-prepared meals, condiment and cooking oil packaging, pet food, and coffee packaging. Its purpose is to significantly extend the shelf life of food while ensuring its safety and flavor. Its upstream suppliers include suppliers of EVOH resin, PA/PE/adhesives (EAA/EMA), additives, and processing aids, while its downstream customers include food packaging plants and food processing companies. This film is particularly crucial in the cold chain and high-value-added food export market. Gross profit margins for food-grade EVOH multi-layer co-extruded film manufacturers are significantly affected by price fluctuations of upstream copolymers such as EVOH and PA, ranging from 18% to 35%.

The global Food-Grade EVOH Multilayer Coextruded Film market size was estimated at USD 1303.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
