## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Food Grade Maltitol competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Food Grade Maltitol is a type of sugar alcohol used as a low-calorie sweetener in food products. It has about 70-90% the sweetness of sucrose but with fewer calories. It is commonly used in sugar-free, low-glycemic, and diabetic-friendly foods such as candies, chewing gum, baked goods, and chocolate. It also helps retain moisture and improve texture in processed foods. The Food Grade Maltitol market has been experiencing positive growth over the past few years and is expected to continue this trend in the forecast period. One of the major factors driving the market growth is the increasing demand for sugar substitutes in the food and beverage industry. Maltitol, as a sugar alcohol, is widely used as a sweetener and flavor enhancer in various food and beverage products. It provides a similar taste and texture to sugar but with fewer calories and a lower impact on blood sugar levels, making it a popular choice among health-conscious consumers and individuals with diabetes. Moreover, the growing consumer awareness about the adverse health effects of excessive sugar consumption has led to a shift towards healthier alternatives. Maltitol, being a sugar substitute with a lower glycemic index, is considered a healthier option for those looking to reduce their sugar intake without compromising on taste.

The global Food Grade Maltitol market size was estimated at USD 564.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
