Abstracts

Food Grade Pectin is a natural carbohydrate found in fruits, particularly in the peels and cores of apples, citrus fruits, and other fruits. It is used as a gelling agent, stabilizer, and thickener in the food industry, primarily in the production of jams, jellies, fruit preserves, and other fruit-based products. As consumer demand for natural and healthy foods continues to rise, the market trends for food-grade pectin are also changing. Globally, the demand for clean label products is growing rapidly, driving the use of natural food additives, with pectin becoming an increasingly popular ingredient among food manufacturers. Especially in products like jams, jellies, and fruit preserves, food-grade pectin has become an essential component. Additionally, with the rise of organic and non-GMO foods, consumers' preference for ingredients sourced from natural and traceable origins has prompted pectin producers to adjust their product lines to meet these demands. As a result, the demand for organic and non-GMO pectin is steadily increasing. Specifically, in the health and functional food sectors, pectin is gaining more attention due to its health benefits, such as lowering cholesterol.

The global Food Grade Pectin market size was estimated at USD 1423.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
