Report Overview

Food grade silicone tableware refers to tableware made of silicone materials, non-toxic, tasteless, high temperature resistant, and molded with food-grade silicone. Compared with ceramic, plastic, and hardware tableware, silicone tableware is compatible with the temperature. No matter whether the food is cold or hot, it can protect the temperature of the food itself, reduce temperature changes and loss, and place it in a silicone bowl or basin for a period of time. The food can also maintain the original temperature, and the corresponding temperature will not be transmitted to the user during use.
