Abstracts

A food-grade sodium bicarbonate substitute is an alternative ingredient used in cooking and baking to replace sodium bicarbonate, commonly known as baking soda. Sodium bicarbonate is a leavening agent and a key ingredient in many recipes, as it helps baked goods rise. However, there are situations where a substitute may be needed due to dietary restrictions, allergies, or ingredient availability. The substitute should be a safe, food-grade alternative that can perform a similar leavening function. With an increasing focus on reducing sodium intake for better health, there is a growing demand for low-sodium or sodium-free leavening alternatives. Manufacturers are developing substitutes that can provide leavening effects in recipes while containing minimal to no sodium.

The global Food Grade Sodium Bicarbonate Substitute market size was estimated at USD 440.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
