Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Food Grade Trimagnesium Phosphate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Food grade trimagnesium phosphate is an inorganic compound composed of magnesium and phosphorus elements. The chemical formula is $Mg_3(PO_4)_2$. It is mainly used in the food industry as a nutritional supplement, anti-caking agent, stabilizer and food additive. Food grade trimagnesium phosphate meets food safety standards and can be safely used in the production of food and beverages. In 2024, global Food Grade Trimagnesium Phosphate production reached approximately 9346 MT, with an average global market price of around US\$ 7324 per MT. A single production line of three magnesium phosphate is about 1,000 tons, with a gross profit margin of about 30%. Upstream Phosphorus-containing raw materials: Phosphoric acid: the most commonly used phosphorus source; Sodium phosphate/potassium/ammonium: Sometimes used in metathesis reactions. Magnesium-containing raw materials: magnesium oxide or magnesium hydroxide: The most commonly used magnesium source, with high purity requirements; magnesium chloride or magnesium sulfate: used to metathesis reaction with sodium phosphate, etc., but may introduce by-product salts that need to be removed. Midstream core technology: Neutralization/precipitation method: Phosphoric acid reacts with magnesium oxide/magnesium hydroxide at a specific temperature and pH to produce trimagnesium phosphate precipitate. This is the most mainstream method. Metathesis: Reacts soluble phosphate (such as trisodium phosphate) with soluble magnesium salt (such as magnesium chloride). Key processes: Reaction synthesis ? Filtration/washing ? Dry ? Crush/Sieve ? Packaging. Downstream: mainly used in the food industry. Direct raw materials account for 65%-75% of the total cost; direct energy accounts for 10%-15% of

the total cost; labor costs account for 5%-8% of the total cost.

The global Food Grade Trimagnesium Phosphate market size was estimated at USD 68.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
