Abstracts

Food greaseproof papers are specialized cellulose-based sheets or rolls treated with sizing agents or silicone coatings to achieve oil and grease resistance, making them suitable for packaging, wrapping, and lining applications in food preparation, storage, and service without compromising structural integrity or allowing fat migration. These papers are distinct from wax or parchment papers, as they rely on specific chemical treatments rather than wax impregnation to repel oils while remaining breathable and often heat-resistant, commonly used for items like baked goods, fried foods, butter wraps, and fast-food packaging to maintain product quality, hygiene, and presentation.

The global Food Greaseproof Papers market size was estimated at USD 1400.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
