## Abstracts

Polyols can be used in reduced-sugar foods because they are sugar-free, reduced-calorie, low-digestible sweeteners. The Food Polyols market is a rapidly expanding and innovative segment within the food and beverage industry, driven by the increasing consumer demand for healthier, reduced-sugar, and low-calorie food products. Food polyols, also known as sugar alcohols, serve as versatile sugar substitutes that provide sweetness without the same level of caloric impact as traditional sugars. This market has experienced significant growth due to heightened awareness of the adverse health effects of excessive sugar consumption, such as obesity and diabetes. Food polyols are widely used in a variety of food products, including sugar-free confectionery, baked goods, beverages, and dairy products, to reduce sugar content while maintaining taste and texture. Key drivers behind the market's expansion include rising consumer interest in low-carb and keto diets, a growing preference for healthier food choices, and regulatory efforts to label added sugars transparently. Moreover, as food manufacturers continue to innovate and reformulate their products to meet changing dietary preferences, the Food Polyols market is poised for ongoing growth, offering a valuable solution for creating reduced-sugar and more nutritionally balanced food options.

The global Food Polyols market size was estimated at USD 473.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.70% during the forecast period.
