Abstracts

Forestry Wheel Harvester is a heavy-duty machine specially used for forestry operations. It is designed with a wheeled chassis and can efficiently complete tasks such as tree felling, branching and cutting in the woodland. It is usually equipped with a powerful hydraulic system, an advanced felling head (Harvester Head) and a precise control system to ensure that trees of different diameters can be handled quickly and safely. Compared with crawler fellers, wheeled fellers are particularly suitable for flat or moderately undulating forest environments due to their flexibility, lower ground pressure and higher moving speed.

The global Forestry Wheel Harvester market size was estimated at USD 527.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Forestry Wheel Harvester market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
