## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Forged Steel Rolls competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Forged steel rolls are high-strength mill rolls produced through ingot forging, widely used in hot rolling, cold rolling, and section rolling mills to perform primary metal reduction tasks. Their manufacturing process involves steel ingot melting, forging, heat treatment, rough and finish machining (turning, grinding, and dynamic balancing), and surface enhancement treatments to improve wear resistance, thermal crack resistance, and service life. Upstream raw materials primarily include alloy steel ingots (containing Cr, Mo, Ni, V, etc.), refractory materials, and auxiliary processing materials, supplied mainly by specialty steel and alloy material manufacturers. Downstream customers include large steel groups (such as Baowu Steel Group, Ansteel, ArcelorMittal, POSCO), regional re-rolling mills, and rolling mill equipment manufacturers. Forged steel rolls are favored in high-load production lines and critical rolling stands due to their superior strength and reliability. In 2024, the global production capacity of forged steel rolls was estimated at 720,000 tons, with shipments of approximately 600,000 tons. The average market price was around USD 2,450 per ton. The average gross margin is estimated at 23%, higher than that of cast rolls, reflecting the higher technical threshold and added value. Major production regions include China, Japan, Europe, and the United States, with European and Japanese companies dominating the high-end hot rolling, cold rolling, and specialty steel markets, while Chinese companies hold cost advantages in mid-to-low-end and replacement markets. Future trends include surface alloying, forging process optimization, and digital monitoring technologies to extend service life and meet high-end rolling requirements.

The global Forged Steel Rolls market size was estimated at USD 1470.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
