The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Forging Crane competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of forging cranes reached 3,800 units, with an average selling price of \$560,000 per unit. Forging cranes are a type of heavy-duty lifting equipment specifically used in large forging shops and metallurgical plants. They typically feature high-temperature protection, heavy-load capacity, and adaptability to complex working conditions. They are capable of precisely transferring large forgings or steel ingots between high-temperature furnaces, forging presses, and manipulators. Compared to conventional bridge cranes, forging cranes are designed with greater emphasis on high reliability, impact resistance, and tolerance to high-temperature environments. They are also equipped with intelligent control features such as anti-sway, automatic positioning, and remote monitoring. These cranes are widely used in industries such as aerospace, energy, shipbuilding, military, heavy machinery, and rail transit, and are crucial to the production of high-end large forgings.

The global Forging Crane market size was estimated at USD 2129.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
