Abstracts

The forklift steering gearbox is a critical mechanical component within the hydraulic or electric steering system of a forklift, responsible for translating the rotational input from the steering wheel into the lateral movement of the wheels, enabling precise directional control and maneuverability in tight spaces typical of industrial and warehouse environments. It functions by utilizing a combination of gears, shafts, and hydraulic pressure (in power steering systems) to reduce the effort required by the operator while maintaining durability under heavy loads and frequent use. Designed to withstand high stress, contamination, and repetitive motion, the gearbox ensures operational safety and efficiency, with variations including integral, semi-integral, and manual types tailored to different forklift models and applications.

The global Forklift Steering Gearbox market size was estimated at USD 1020.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
