Report Overview

Form-fill-seal machines are machines that form the package, fill it with a wet or dry product and seal it closed. Most FFS systems use flexible film to form the primary package, such as a bag or pouch. But gable-top and aseptic cartons are also created in a form-fill-seal operation. And most blister packs are produced with a thermoform/fill/seal machine, a close cousin. Form fill and sealing equipment are used in the packaging of F&B, pharmaceuticals, chemicals, and consumer products. Each FFS machine forms the packaging material from a roll or a stack. Then the formed packaging material is filled and sealed.
