Report Overview

A fixing agent is often employed in the textile or garment manufacturing process to bond fibers together in order to create finished goods like clothing items or household linens. Formaldehyde has historically been used as a fixative due to its ability to chemically bind fabrics together so that they retain shape even after multiple wash cycles. However, formaldehyde also happens to be highly toxic and dangerous to humans if breathed or touched in high enough quantities. Hence, many companies have started exploring safer alternatives, including formaldehyde-free fixing agents derived from plant extracts such as citrus peel oils or apple juice concentrate.

The global Formaldehyde Free Fixing Agent market size was estimated at USD 285.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
