Abstracts

The formaldehyde purifier uses multiple filtration systems to accelerate the absorption of indoor formaldehyde, maintain a high clean air delivery rate (CADR) with high efficiency, and operate quietly. The result is a fresh, vibrant air in interior spaces. Rising prevalence of airborne diseases coupled with rapidly rising air pollution levels across the globe is expected to impact the growth of the global air purifiers market over the forecast period. Furthermore, rising health awareness, rising living standards, and increasing disposable income are likely to be another key factor driving market growth in the coming years. Several government agencies are focusing on regulating air pollution by introducing multiple stringent regulations and standards to improve indoor air quality, which is expected to aid market growth. Furthermore, numerous air pollution control activities carried out by various governmental and non-governmental organizations across the world are expected to positively impact the global air purifier market. For example, in September 2020, Phillips launched innovative measures for homes, schools and offices to promote the delivery of clean air across the country. Phillips is working with experts in the field to study the effect of air filtration on indoor viral aerosol levels. Rapid urbanization, industrialization, and modernization have led to massive increases in global pollution levels, causing breathing difficulties, which in turn lead to respiratory diseases such as asthma. This is the main reason for the increase in demand for air purifiers. Moreover, both major and emerging players are focused on utilizing and offering the best and advanced technologies in the form of air purifiers. Therefore, technological upgrades, increasing investments, and growing research and development have driven the expansion of the global air purifier market.

The global Formaldehyde Purifiers market size was estimated at USD 8617.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.40% during the forecast period.
