Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Formulated Polyol for PU Rigid Foam competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. PU Rigid Foam Formulated Polyol (Polyether polyols) is one of the key basic raw materials for the preparation of polyurethane rigid foam plastics. It needs to work synergistically with polyisocyanate compounds (typically represented by MDI and TDI) through free radical foaming reactions to eventually generate polyurethane rigid foam materials with dense closed-cell structures. As the "core formula skeleton" of polyurethane rigid foam, its component design and performance parameters (such as hydroxyl value, viscosity, foaming agent type, etc.) directly determine the thermal insulation efficiency, thermal insulation performance, waterproof reliability and mechanical strength (such as compressive resistance and dimensional stability) of the finished foam. This feature makes it an indispensable material foundation in scenarios such as building energy conservation (such as exterior wall insulation boards, roof insulation layers), cold chain logistics equipment (such as cold storage enclosures, refrigerated containers), industrial equipment protection (such as pipeline insulation layers, tank interlayers) and home appliance manufacturing (such as refrigerator boxes and freezer shells).

The global Formulated Polyol for PU Rigid Foam market size was estimated at USD 11900.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the forecast period.
