## Abstracts

The FCW controller is the core component of the forward collision warning system (FCW). It integrates multiple sensors (such as radar, camera, ultrasonic sensor, etc.) and advanced algorithms to analyze the traffic conditions in front of the vehicle in real time, predict and determine whether there is a collision risk. The FCW controller uses sensors to continuously obtain information about the distance, speed and position of the vehicle or obstacle ahead. Based on the acquired data, a complex algorithm is used to assess whether there is a potential risk of collision. When the system determines that there is a risk of collision, it warns the driver through a variety of means, such as visual (such as warning lights on the dashboard), auditory (such as alarm sounds) or tactile (such as steering wheel vibration).

The global Forward Collision Warning Fcw Controller market size was estimated at USD 2184.19 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
