Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Foundry Core Machines competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Foundry core machines are specialized equipment used in the metal casting industry to create cores, which are internal components or cavities in casting molds. These machines produce cores by forming a mixture of sand, resin, and other materials into specific shapes that are then hardened. The cores are placed inside molds to create hollow sections or intricate internal details in cast metal parts. Foundry core machines are essential for producing complex and high-precision castings used in various industries, including automotive, aerospace, and manufacturing. They improve casting accuracy, reduce manual labor, and enhance production efficiency. From the perspective of product types, cold core process core making machines occupy an important position. Cold core process core making machines are new technologies that have been gradually promoted in recent years. They have good sand shooting effects and high sand shooting efficiency, and will have a large market capacity in the future. It is expected that the market share will gradually increase, replacing some hot core process core making machines on the market. Inorganic process core making machines are difficult to develop and have high equipment costs. The current market capacity is small, but due to their green and environmentally friendly characteristics, they have strong development potential. At the same time, in terms of application, the automotive industry is the largest downstream market. Since core making equipment is a large-scale equipment used in sand casting, and more than 40% of sand casting is used in the automotive industry, the automotive industry is also the largest downstream application of core making equipment. From the perspective of manufacturers, globally, the core manufacturers of core making equipment mainly include Laempe M?ssner

Sinto, Loramendi, Suzhou Mingzhi Technology, Omega Sinto, L?ber, Suzhou Suzhu Intelligent Equipment, JML Industrie, Suzhou Sanxin Machinery Manufacturing and Weifang Shenglin Casting Machinery, etc. The core-making equipment market is moving toward high automation, integrating robots and intelligent systems to improve production accuracy and efficiency while minimizing human errors. This shift is characterized by a shift from stand-alone machines to intelligent systems that can automate the entire process, supported by modern technologies such as 5G and big data. In addition, manufacturers are also focusing on energy conservation and emission reduction and sustainable practices, while pursuing higher quality sand cores by optimizing processes.

The global Foundry Core Machines market size was estimated at USD 319.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
