## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Foundry Nodularizers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Foundry nodularizers are additives used in casting to transform graphite into spherical shapes. Comprising elements like magnesium, calcium, and rare - earth metals, they reduce graphite surface tension during iron - liquid reactions, improving the ductility and mechanical properties of cast iron, essential for producing high - quality nodular cast iron. Foundry Nodularizers are mainly used in ductile iron production and are widely used in automobile manufacturing, such as engine blocks, wheels and other castings; various parts in the field of mechanical manufacturing; and water supply and drainage pipes in municipal engineering. With the development of the industry, emerging application areas are also constantly expanding. ?At present, the Foundry Nodularizers market presents several major trends. On the technical level, the research and development direction is towards high purity, low impurities, and precise proportioning to improve the spheroidizing effect and casting quality. In terms of environmental protection, due to the tightening of environmental protection policies, it is inevitable to develop green and low-pollution production processes. In terms of market demand, the upgrading of manufacturing industry and the rise of emerging industries have increased the demand for high-performance ductile iron, which has promoted the expansion of the nodularizer market. At the same time, the industry concentration has gradually increased, and leading players have occupied a favorable position in the market competition with their advantages in technology and scale.

The global Foundry Nodularizers market size was estimated at USD 396.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40%

during the forecast period.
