Report Overview

Foundry robots are specialized industrial robots designed to operate in high-temperature, harsh environments typical of foundries, where metals are melted, poured, and cast into molds. These robots are built with heat-resistant materials, protective coatings, and advanced cooling systems to withstand extreme conditions, including exposure to molten metal, dust, and fumes. They perform tasks such as pouring molten metal, handling molds, deburring cast parts, and cleaning finished products, significantly improving efficiency, precision, and worker safety. Foundry robots often feature enhanced durability, precision controls, and compatibility with automation systems, making them essential in modern metal casting operations. The market for these robots is driven by the growing demand for automation in heavy industries, stricter workplace safety regulations, and the need for higher productivity in metal manufacturing.

The global Foundry Robots market size was estimated at USD 1235.92 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.67% during the forecast period.
