Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Four-axis SCARA Collaborative Robot competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The four-axis SCARA collaborative robot is an intelligent industrial robot that integrates SCARA mechanisms and collaborative safety functions. It has the characteristics of high rigidity, high speed and high precision of a horizontal multi-joint structure, and integrates the collision detection, force control and compliance control and human-machine interaction capabilities of collaborative robots. This type of robot adopts a four-degree-of-freedom layout (X, Y, Z linear motion + θ -axis rotation), which is suitable for application scenarios such as fast and highly repeatable assembly, handling, dispensing and inspection, and is particularly suitable for high-beat production tasks of small and medium-sized workpieces. Compared with traditional SCARA, the SCARA collaborative robot further simplifies the system integration process, does not require safety fences, supports drag teaching, graphical programming, visual guidance and remote collaborative control, and significantly improves the feasibility of flexible manufacturing and human-machine collaboration.

The global Four-axis SCARA Collaborative Robot market size was estimated at USD 148.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.30% during the forecast period.
