Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Four Channel Thromboelastography competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Four-channel thromboelastography (TEG) is an advanced diagnostic system that simultaneously analyzes four blood samples to assess hemostasis and coagulation function in real time. This setup allows for parallel testing, such as comparing samples with different reagents (e.g., activators, inhibitors), improving diagnostic accuracy and enabling comprehensive coagulation profiling in time-sensitive clinical situations like trauma, surgery, or liver transplantation. The system provides key parameters including R time, K time, α -angle, MA (maximum amplitude), and LY30 (fibrinolysis) for each channel, offering insights into clot initiation, formation speed, strength, and breakdown. Four-channel TEG is especially valuable for personalized transfusion management, reducing unnecessary blood product use. It typically features automated pipetting, temperature control, and digital data integration with hospital systems.

The global Four Channel Thromboelastography market size was estimated at USD 276.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
