## Abstracts

As the fourth generation of insecticides after organophosphates, carbamates, and pyrethroids, neonicotinoid pesticides can be divided into four generations of products according to their chemical structure: five-membered ring, six-membered ring, chlorinated, thiolated, and furan-type products. This classification not only reflects the development history of neonicotinoid pesticides, but also reflects the continuous innovation capabilities of the pesticide industry. Compared with the previous three generations of insecticides, the fourth generation of insecticides has significantly improved insecticidal effects, resistance management, and ecological safety. The research and development goals of the fourth generation of insecticides include more precise targeting of pests, reducing negative impacts on the environment and other organisms, and avoiding crop residue problems while preventing and controlling pests.

The global Fourth Generation Insecticide market size was estimated at USD 1825.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
