Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on FPC CCS competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. FPC integrated busbar refers to the use of FPC etching process substrate as the carrier of information collection components, connecting copper and aluminum busbars and plastic structural parts, which can simulate the blowing fuse. It has the characteristics of stable signal transmission, high reliability, light and thin structure, high cost and high degree of automation. As a core component in the fields of new energy vehicles, energy storage and industrial automation, the FPC CCS market is expanding rapidly due to the surge in downstream demand, with the Asia-Pacific region occupying a dominant position. The technological trend focuses on lightweight, intelligent and high integration, promoting material innovation and process upgrades, but the industry faces challenges such as fluctuations in raw material prices, differentiation of technological routes, competition between international brands and local companies, and stricter environmental regulations. Companies with equipment self-manufacturing capabilities, cost control and customer binding advantages are expected to occupy a dominant position during the industry integration period.

The global FPC CCS market size was estimated at USD 352.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global FPC CCS market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging
