Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on FPC Cover Layer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global FPC Cover Layer production reached approximately 72,222.02 K Sqm, with an average global market price of around US\$ 6,579.74 per k sqm. FPC coverlay consists of a solid sheet of polyimide bonded to a layer of flexible adhesive. The coverlay performs the same function as solder mask on rigid boards, but specifically for flexible printed circuit boards (PCBs). Traditional solder mask has limited flexibility, so for flexible circuits requiring greater flexibility, a coverlay is bonded (glued) to encapsulate and protect the outer copper circuit layers of the flexible printed circuit (FPC). Unlike rigid PCB solder mask, coverlay is typically supplied in roll form, sometimes in sheets cut to size. The required coverlay openings can then be drilled, routed, punched, or laser-cut, depending on the complexity and feature size of the flexible PCB design. Once the pattern is created, the film is aligned to the copper circuit layers, and heat and pressure are applied to cure the adhesive, completing the coverlay bonding. The FPC coverlay market is currently experiencing a booming growth phase. With the rapid development of consumer electronics, smartphones, wearable devices, automotive electronics, and other fields, demand for flexible printed circuits (FPCs) is growing. As a key component of FPCs, market demand for FPC coverlays is also rising in tandem.

The global FPC Cover Layer market size was estimated at USD 475.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
