Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on FPC Stiffener competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of FPC Stiffeners reached 3.84 million square meters, with an average selling price of US\$52.32 per square meter. The average gross profit margin is approximately 35%. FPC stiffeners are attached to specific locations or areas of FPC (Flexible Printed Circuit) boards to increase thickness, enhance mechanical strength, and facilitate surface mount components. The stiffener is not an electrical component of the flexible circuit board; rather, it provides mechanical support. It is an additional mechanical part that provides mechanical support to the FPC during assembly. The FPC Stiffener industry chain consists of two main upstream sectors: upstream, reinforcing substrates (FR-4, PI film/sheet, metals such as stainless steel/aluminum) and key auxiliary materials such as adhesives (double-sided tape/transfer adhesive, high-temperature resistant and low-volatile adhesive systems). Representative suppliers include DuPont (Kapton PI film), Kaneka (APICAL/PIXEO PI film), Isola and other FR-4 system manufacturers, as well as Nitto, LINTEC and other tape/adhesive material suppliers. The midstream is completed by "converter/die-cutting plants" that perform precision die-cutting/punching/laser cutting and alignment bonding, and FPC manufacturers. The materials are processed into reinforcing parts and bonded to the connector or device area before being delivered as "reinforced FPCs". Downstream demand mainly comes from scenarios with high requirements for "connector insertion and removal reliability, local rigidity, thickness tolerance and assembly yield", such as mobile phones and wearables, display modules, automotive electronics, communications and data centers, industrial and medical applications. In the current market, stiffeners are mostly used as supporting process items for FPCs, and their

scale usually fluctuates with the overall FPC market and the evolution of end-user forms. Future trends point to thinner and lighter (PI/stepped reinforcement), higher reliability (automotive-grade materials and adhesive upgrades), more automated and high-precision bonding and testing, and functionalization of reinforcement components (integrated heat dissipation/shielding/wear resistance).

The global FPC Stiffener market size was estimated at USD 201.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
