Abstracts

The FPD pellicle is a part of the photomask. As a covering, the pellicle is suspended above the photomask to form a physical barrier. Even if particles fall on it, they will not touch the mask itself. The pellicle can effectively prevent mask contamination and plays a vital role in improving production efficiency and chip quality. With the widespread application of display technologies such as OLED, LCD, and MicroLED, the demand for display protection during the production process is also growing. FPD Pellicle can effectively prevent display panels from being contaminated by particulate matter during the production process, thereby improving the quality and yield of display panels. In addition, as panel production advances to larger sizes and higher-generation production lines, the demand for Pellicle is gradually increasing. High-generation production lines (such as 10.5 generations and higher) require more sophisticated and efficient protection solutions. The Asia-Pacific is one of the main markets in the FPD Pellicle market, especially in countries such as China and South Korea, where the production scale of flat panel displays is large and there are multiple display manufacturing giants. The demand for high-generation and high-quality panels in the region has led to a continuous increase in the demand for FPD Pellicle. Mitsui Chemicals, Shin-Etsu Chemical, and FST are leading companies in the industry. Asahi Kasei's own protective film business was first commercialized in 1986. Since then, the business has been supporting the market as the number one supplier in the FPD protective film market. By acquiring this business in 2022, Mitsui Chemicals aims to combine its own protective film business in cutting-edge fields with Asahi Kasei's extensive protective film business portfolio to become a comprehensive protective film manufacturer, thereby consolidating its leading position on the global stage.

The global FPD Pellicle market size was estimated at USD 181.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the

forecast period.
