### Report Overview

FPGA-based Smart NICs are network interface cards equipped with a Field-Programmable Gate Array (FPGA) chip that can be customized or reprogrammed to handle specific network functions. FPGA-based Smart NICs are particularly useful in data center and cloud environments that demand high-performance networking and require low-latency and high-throughput network processing. With FPGA-based Smart NICs, organizations can implement custom solutions and protocols to meet specific application requirements. FPGA-based Smart NICs allow the creation of proprietary network solutions to handle unique use cases. Further, FPGA-based Smart NICs provide hardware-level programmability and customization, which is faster than software-level customization. FPGA-based Smart NICs can be used for network acceleration, security, and offloading functions to improve the performance of data center and cloud applications. For instance, FPGA-based Smart NICs can be programmed to handle network encryption, traffic shaping, and packet filtering to improve data security. Additionally, FPGA-based Smart NICs can offload the processing of redundant packets and network protocols, thereby reducing the workload of server CPUs and improving overall system performance.
