Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on FPV Drone Propellers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of FPV drone propellers will reach 2.087 million units, with an average selling price of \$68.53 per unit. FPV Drone Propellers refer to the rotating blades attached to a first-person view (FPV) drone that generate lift and thrust to propel the drone through the air. These propellers are essential components of the drone's propulsion system, allowing it to maneuver and fly in different directions. The size, shape, and material of the propellers can affect the drone's performance, speed, and agility. Choosing the right propellers for a FPV drone is crucial for achieving optimal flight characteristics and stability during aerial maneuvers. The upstream of the FPV drone propeller industry chain covers carbon fiber/glass fiber reinforced composites, engineering plastics, mold steel and processing equipment; the midstream focuses on design and manufacturing, using CAD/CAE software to achieve aerodynamic optimization design, and adopts carbon fiber prepreg molding, nylon injection molding, 3D printing light curing and other molding processes. Representative companies include China's T-Motor and Qianfeng Technology, which are dominated by the consumer grade, the US BETA FPV and Lumenier, which focus on high-end carbon fiber propellers, and Europe's HQ Prop and Germany's Racekraft, which excel in precision manufacturing; the downstream extends to consumer-grade FPV drones (DJI and Walkera flying drones/aerial photography drones for competition, film and television, and entertainment), industrial-grade applications, and military and special fields, forming a closed-loop linkage of "material innovation-propeller type optimization-scenario drive".

The global FPV Drone Propellers market size was estimated at USD 143.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
