### Report Overview

FR4 is a class of printed circuit board base material made from a flame retardant epoxy resin and glass fabric composite. FR stands for flame retardant and meets the requirements of UL94V-0. FR4 has good adhesion to copper foil and has minimal water absorption, making it very suitable for standard applications. FR4 sheets are widely popular among electrical engineers and designers as a PCB base material. The low cost and versatility of the material, as well as its wealth of beneficial physical properties, account for that popularity. FR4 sheets are electrical insulators with high dielectric strength. They also feature a high strength-to-weight ratio and are lightweight and resistant to moisture. Add this to their relative temperature resistance, and FR4 material can perform well in most environmental conditions.

The global FR4 Printed Circuit Board market size was estimated at USD 11230 million in 2023 and is projected to reach USD 17272.66 million by 2032, exhibiting a CAGR of 4.90% during the forecast period.

North America FR4 Printed Circuit Board market size was estimated at USD 3177.18 million in 2023, at a CAGR of 4.20% during the forecast period of 2024 through 2032.
