During the fracturing construction process, tools such as frac balls and bridge plugs are required to block the construction strings of different working layers. Tools such as the frac ball made of common alloys can reduce well productivity if they become lodged in the well. Soluble frac balls replace steel balls and resin balls, which can avoid risks such as difficult flow back and blockage during construction.

The global Frac Balls market size was estimated at USD 263.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
