Report Overview

Fracking fluid & chemicals are a group of water, chemicals and sand. Its composition is exceptional to each industry player as they alter the structure according to their needs depending upon the presence of surface water or ground water in the manufacturing plant. Selection of fracking mixture majorly depends on the area and regulations instructed by local as well as state governments. It is used to reduce the pressure loss due to friction, which generates enough pressure drop to well maintain stability of the mixture. Adding additives in hydraulic fracturing deliver various functions including dissolving minerals, preventing scale deposition, maintaining fluid viscosity, corrosion resistance, stabilizing the product and dissolving minerals.
