Report Overview

A fractional-horsepower motor (FHP) is an electric motor with a rated output power of 746.9 or 746 Watts or less. There is no defined minimum output, however, it is generally accepted that a motor with a frame size of less than 35mm square can be referred to as a 'micro-motor'. The term 'fractional' indicates that the motor often has a power rating smaller than one horsepower.

Growing population, expanding middle class, and rising urbanization in developing nations will be the major contributors to this steady growth. The market will be dominated by APAC, followed by the Americas and EMEA. APAC is expected to witness better growth rates than other regions due to the growth of emerging markets such as India and China.
