Abstracts

The Frame Chain Slag Eliminator is a specialized industrial device used primarily in steel manufacturing and metal processing industries to remove slag?a byproduct composed of impurities and non-metallic residues?from molten metal during casting or refining processes. It typically employs a mechanized frame and chain system that physically separates and extracts slag from the surface of molten metal in furnaces, ladles, or continuous casting lines, thereby improving metal purity, operational efficiency, and product quality. This equipment is critical in minimizing defects, reducing energy consumption, and extending the lifespan of refractory materials by preventing slag contamination and buildup. Its design often incorporates heat-resistant materials and automated controls to function effectively in high-temperature environments, aligning with the demands of modern, high-volume metal production facilities.
