Report Overview

Frame scaffold, also known as tubular scaffolding or modular scaffolding, is a temporary structure widely used in construction, maintenance, and repair projects to provide secure working platforms at elevated heights. It consists of prefabricated steel or aluminum frames connected by braces and crossbars, offering flexibility, stability, and ease of assembly. The system typically includes base plates, guardrails, and planks to ensure worker safety and compliance with industry regulations. Due to its modular nature, frame scaffold can be customized to fit various project requirements, making it a preferred choice for both small-scale renovations and large construction projects.
