Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Frameless Permanent Magnet Synchronous Torque Motor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global average price of a frameless permanent magnet synchronous torque motor was \$2000, with annual sales of approximately 420,000 units. This type of motor is a direct-drive torque motor that utilizes a toroidal coil and radially distributed permanent magnet structure. Eliminating the traditional frame structure with a base and bearing supports, it is integrated directly into the user's mechanical system, offering high torque density, zero transmission backlash, extremely low moment of inertia, and high dynamic response. Its toroidal structure ensures a large hollow channel while also achieving greater torque uniformity and low cogging. It is ideally suited for applications requiring high-precision positioning and smooth torque output, such as satellite attitude control systems, aerospace servos, semiconductor wafer handling, medical imaging equipment, and advanced robotic joints. With increasing demand for high-performance direct-drive technology in precision equipment, aerospace exploration, and the new energy industry, Frameless permanent magnet synchronous torque motors are becoming a key growth area in the drive sector.

The global Frameless Permanent Magnet Synchronous Torque Motor market size was estimated at USD 844.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.10% during the forecast period.
