Abstracts

The frameless resolver is an innovative electromagnetic sensor that removes the mechanical housing of the traditional resolver, making it more compact and lightweight, and easy to install in space-constrained applications. Its feature is that it adopts a frameless design, which reduces mechanical vibration and inertia, and improves the response speed and stability of the system. The frameless resolver has excellent reliability, can maintain stable performance in harsh environments, and has a higher speed tolerance, making it suitable for high-speed rotation applications. In addition, the output sinusoidal signal is highly accurate and easy to combine with digital signal processing technology, providing reliable guarantees for precise measurement and control, making it an ideal choice for high-precision angle and speed detection.

The global Frameless Resolvers market size was estimated at USD 303.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
