Abstracts

Free Cutting Steels are unalloyed or low-alloy quality steels that are known for their excellent machinability. They have an increased sulphur content and may also contain lead. Free cutting steel is a kind of wire rod product that is specially designed to be machined by chip removal with high productivity. It is mainly used for fabricating parts for automotive and electronic & OA equipment, where complex shapes and size precision are required. The automotive industry is a significant consumer of free cutting steels, particularly for producing components like shafts, bearings, and valves. As vehicle manufacturing continues to evolve toward lightweight and more efficient designs (e.g., electric vehicles), the demand for high-performance free machining steels is expected to rise. Also industries such as aerospace, medical devices, and precision machinery are expanding, leading to greater demand for free cutting steels. The need for high-quality components that meet stringent tolerances drives manufacturers to select suitable materials that facilitate easier machining without compromising mechanical properties.

The global Free Cutting Steel market size was estimated at USD 4810.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
