Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Free Secondary Vulcanization Liquid Silicone Rubber competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Free Secondary Vulcanization Liquid Silicone Rubber is a high-purity silicone elastomer material that can be directly molded and achieve its final performance without the traditional "molding and secondary vulcanization" process. Based on a high-molecular-weight polysiloxane backbone, it achieves rapid vulcanization through a highly efficient platinum-catalyzed addition reaction. The curing process eliminates the release of small molecules, eliminating the need for post-molding high-temperature baking. It exhibits high elasticity, resistance to high and low temperatures, aging resistance, chemical resistance, and high transparency. The upstream industry for liquid silicone rubber (LSR) requiring no secondary vulcanization primarily includes silicone monomers, platinum catalysts, crosslinkers, inhibitors, and fillers; its downstream industry encompasses a number of high-growth industries, including food, baby products, and healthcare. Technical barriers within this industry chain primarily focus on formulation system design, impurity control, and molding process matching. With the global expansion of high-end manufacturing and increasing pressure to save energy and reduce consumption, the development of LSR requiring no secondary vulcanization is accelerating, driving the industry chain towards high-end manufacturing and automation. Global production in 2024 is expected to be approximately 52,200 tons, with an average market price of approximately \$5,200 per ton. Major industry players will have gross profit margins ranging from 22% to 36%. The annual production capacity of a single production line is estimated to be between 8,000 and 15,000 tons.

The global Free Secondary Vulcanization Liquid Silicone Rubber market size was estimated at USD 271.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
