## Abstracts

Lyophilized cell culture medium is a medium used to preserve and culture cells that has been lyophilized (frozen and dried) for long-term storage and resuspended and cultured by adding appropriate liquid when needed. The culture medium typically contains nutrients, growth factors, amino acids, and other key ingredients that the cells need to support their growth and proliferation. As stem cell treatment technology continues to mature and clinical applications expand, the demand for freeze-dried cell culture media is also increasing. At the same time, the government's support and investment in stem cell research are gradually increasing, further promoting the development of the market. It is expected that the freeze-dried cell culture media market will continue to maintain rapid growth in the next few years. In addition, freeze-dried cell culture media are mainly divided into two categories: basic culture media and supplements. Basal medium provides the essential nutrients needed for cell growth, while supplements are used to adjust the performance of the medium to meet the growth needs of specific cells. As technology continues to advance and market competition intensifies, companies are constantly developing new freeze-dried cell culture media to improve cell growth efficiency and quality. In general, the freeze-dried cell culture medium market has broad development prospects and huge potential.

The global Freeze-dried Cell Culture Medium market size was estimated at USD 816.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
