Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on French Process Zinc Oxide competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. French Process Zinc Oxide is a product made from zinc ingots or zinc slag as raw materials. The zinc vapor is evaporated at high temperatures and then reacted with air to produce zinc oxide. Popularized by the French scientist Leclerc in 1844. Its main characteristic is high product purity. The upstream of its industrial chain is primarily zinc ingots, and fluctuations in the quality and price of raw materials directly impact midstream production. The rubber industry is the largest consumer market, and the increasing demand for high-performance tires from new energy vehicles is driving growth in demand for high-quality zinc oxide in this sector. Global sales in 2024 were approximately 1.3 million tons, with an average market price of approximately US\$2,500 per ton. The annual production capacity of a single production line is around 20,000 tons, and the industry's gross profit margin is in the range of 10%–25%.

The global French Process Zinc Oxide market size was estimated at USD 3249.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
