Abstracts

A Frequency Regulation Energy Storage System is a crucial infrastructure designed to maintain the stability of the power grid by rapidly responding to fluctuations in electrical frequency. In an electrical power system, the grid frequency must be kept within a stable range to ensure the safe operation of generators, transformers, and other equipment, as well as the quality of power supply. When there is an instantaneous imbalance between power supply and demand (such as sudden changes in load or fluctuations in renewable energy generation), the frequency deviates from the standard value, and this is when the frequency regulation process becomes necessary. The energy storage technologies employed in such systems, including lithium - ion batteries, flywheel energy storage, and supercapacitors, leverage their fast response capabilities (ranging from milliseconds to seconds) and flexible charging - discharging characteristics to play a vital role in frequency regulation. When the grid frequency is too high (indicating excess power generation), the energy storage system quickly absorbs the surplus electrical energy through charging; conversely, when the frequency is too low (suggesting excessive power consumption), it immediately discharges to supply additional power, thereby rapidly stabilizing the frequency. Compared with traditional frequency regulation methods, such as those relying on thermal power units, frequency regulation energy storage systems offer significant advantages, including faster response times, higher regulation accuracy, and lower energy consumption. They are especially essential in power grids with a high proportion of renewable energy integration, effectively addressing the intermittency and volatility of renewable power generation, and serving as a key supporting technology for the construction of a new - type power system.

The global Frequency Regulation Energy Storage System market size was estimated at USD 7200.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 18.00% during the forecast period.
