Abstracts

Fresh Bag is a bag made with food film, which is mainly used to store vegetables, fruits, grains, cooked food and other food. It is widely used in daily life. Fresh Bag can be divided into polyethylene (PE), polyvinyl chloride (PVC) and polyvinylidene chloride (PVDC).1. Increased demand for eco-friendly and sustainable packaging: With growing environmental concerns, consumers are seeking packaging solutions that are more sustainable and have less impact on the environment. This trend has led to an increased demand for fresh bags made from biodegradable or compostable materials, such as plant-based plastics or paper. Manufacturers are focusing on developing eco-friendly alternatives that provide the same functionality as traditional fresh bags while reducing waste and environmental harm.2. Emphasis on food safety and preservation: Consumers are becoming more conscious about food safety and the quality of their fresh produce. As a result, there is a demand for fresh bags that can effectively preserve the freshness and extend the shelf life of fruits, vegetables, and other perishable items. Manufacturers are incorporating technologies like breathable films, microperforations, and moisture control features in fresh bags to maintain optimal conditions for the stored produce and minimize spoilage.3. Convenience-oriented designs: Consumers are seeking convenience in their food storage and transportation solutions. Fresh bags with user-friendly features, such as resealable closures, easy-to-open designs, and portion control options, are gaining popularity. These features make it easier for consumers to store, organize, and access their fresh produce, enhancing convenience and reducing food waste.

The global Fresh Bag market size was estimated at USD 1411.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
