Report Overview

Freshwater surimi is a seafood product made from fish meat that has been deboned, minced, and washed to remove impurities, resulting in a paste-like consistency. This paste is then mixed with additives to improve texture and flavor, making it a versatile ingredient used in various cuisines such as Japanese, Korean, and Southeast Asian dishes. Freshwater surimi is known for its mild taste and ability to absorb flavors well, making it popular in dishes like imitation crab sticks, fish cakes, and seafood salads. It is a cost-effective alternative to traditional seafood products and is favored for its convenience and extended shelf life.

In addition, technological advancements in surimi processing techniques are improving the quality and texture of freshwater surimi products, further expanding its market potential.

At the same time, the market for freshwater surimi faces challenges such as fluctuating raw material prices, environmental concerns related to overfishing, and competition from other seafood substitutes.
