Abstracts

The friction coefficient tester is a specialized instrument designed to measure the static and kinetic coefficients of friction between two surfaces, providing critical data for material science, quality control, and product development across industries such as packaging, automotive, textiles, flooring, and medical devices. These testers apply controlled normal force to a sample while moving a sled or probe across its surface, precisely quantifying resistance to motion, which helps manufacturers ensure compliance with safety standards, optimize material performance, and enhance product usability by evaluating slip resistance, wear characteristics, and surface interactions under standardized or simulated real-world conditions.
