Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Friction Modifiers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Friction modifier is a type of chemical additive used to alter the frictional properties of a surface. These additives are commonly used in various applications, including lubricants, automotive fluids, and manufacturing processes, to reduce friction and wear between contacting surfaces. By modifying friction, these additives can improve the efficiency, performance, and longevity of mechanical systems. The market is driven by: Growing global demand for fuel-efficient and low-emission vehicles Increasing industrial automation and need for long-lubricant-life machinery Stricter regulations on engine emissions (e.g., Euro 7, CAFE standards) Development of advanced synthetic lubricants requiring tailored additive packages Asia-Pacific (largest, ~40%): Automotive production hub, rising energy demand, growing industrial base (China, India, Japan) North America (~25%): Mature market; driven by fuel economy regulations and industrial machinery Europe (~20%): Stringent emission standards; early adopter of synthetic lubricants Latin America, MEA: Growing demand in mining, marine, and off-road sectors

The global Friction Modifiers market size was estimated at USD 1225.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
