Abstracts

Frozen meat grinders are versatile and widely used meat processing equipment in the meat production industry. Their operating principle involves pushing raw meat from the hopper into the pre-cutting plate through a screw, and using the rotational extrusion of the screw to cause relative movement between the perforated plate and the grinding blade, thereby cutting the raw meat into granular shapes. This method ensures the uniformity of the meat filling and can achieve the desired meat filling requirements through different combinations of perforated plates. Frozen meat grinders offer various advantages, such as good versatility, wide applicability, and high production efficiency; they have the capability to grind frozen meat, saving time, effort, preserving freshness, and ensuring quality; the grinding process is short in duration and low in temperature rise, conducive to preservation and extending shelf life. They are suitable for various food processing stages, capable of grinding frozen and fresh meat into meat particles of different diameters to meet the processing needs of different products.

The global Frozen Meat Grinders market size was estimated at USD 1485.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
