In 2024, global production of frozen sashimi will reach 76,700 tons, with an average selling price of 7 USD/kg. Frozen sashimi refers to raw seafood slices that have been frozen at low temperatures, usually including tuna, salmon, yellowtail, octopus, shrimp, etc. Its core purpose is to extend the shelf life and ensure food safety while maintaining the original freshness, taste and nutrition. The freezing process usually uses deep freezing technology from -20°C to -35°C to kill potential parasites and bacteria, in line with international raw food standards (such as FDA or EU regulations). Frozen sashimi is widely used in sushi, sashimi platters, bento and high-end catering. It can be used for ready-to-eat, retail and processing.
